

# Advanced Junos Enterprise Switching Using Enhanced Layer 2 Software (AJEX)

ID AJEX Preis 1.800,- € (exkl. MwSt.) Dauer 2 Tage

## Zielgruppe

This course benefits individuals responsible for configuring and monitoring EX Series switches using Junos ELS.

## Voraussetzungen

Students should have an intermediate-level of networking knowledge and an understanding of the Open Systems Interconnection (OSI) reference model and the TCP/IP protocol suite. Students should also attend the [Introduction to the Junos Operating System \(IJOS\)](#) course, the Junos Routing Essentials (JRE) course, and the [Junos Enterprise Switching using ELS \(JEX\)](#) course prior to attending this class.

## Kursziele

This two-day course provides detailed coverage of virtual LAN (VLAN) operations, Multiple Spanning Tree Protocol (MSTP) and VLAN Spanning Tree Protocol (VSTP), authentication and access control for Layer 2 networks, IP telephony features, class of service (CoS) and monitoring and troubleshooting tools and features supported on the EX Series Ethernet Switches. Through demonstrations and hands-on labs, students will gain experience in configuring and monitoring the Junos operating system and in monitoring device and protocol operations. This course uses Juniper Networks EX 4300 Series Ethernet Switches for the hands-on component, but the lab environment does not preclude the course from being applicable to other Juniper hardware platforms running the Junos OS.

After successfully completing this course, you

should be able to:

- Restrict traffic flow within a VLAN.
- Manage dynamic VLAN registration.
- Tunnel Layer 2 traffic through Ethernet networks.
- Review the purpose and operations of a spanning tree.
- Implement multiple spanning-tree instances in a network.
- Implement one or more spanning-tree instances for a VLAN.
- List the benefits of implementing end-user authentication.
- Explain the operations of various access control features.
- Configure and monitor various access control features.
- Describe processing considerations when multiple authentication and access control features are enabled.
- Describe some common IP telephony deployment scenarios.
- Describe features that facilitate IP telephony deployments.
- Configure and monitor features used in IP telephony deployments.
- Explain the purpose and basic operations of CoS.
- Describe CoS features used in Layer 2 networks.
- Configure and monitor CoS in a Layer 2 network.
- Describe a basic troubleshooting method.
- List common issues that disrupt network operations.
- Identify tools used in network troubleshooting.
- Use available tools to resolve network issues.

## Kursinhalt

- Course Introduction

- Advanced Ethernet Switching
- Advanced Spanning Tree
- Authentication and Access Control
- Deploying IP Telephony Features
- Class of Service
- Monitoring and Troubleshooting Layer 2 Networks

## Chapter 7: Monitoring and Troubleshooting Layer 2 Networks

- Introduction to Monitoring and Troubleshooting
- Monitoring and Troubleshooting Tools
- Case Studies
- Lab: Monitoring and Troubleshooting

### **Detaillierter Kursinhalt**

#### **Day 1**

Chapter 1: Course Introduction

Chapter 2: Advanced Ethernet Switching

- Virtual Local Area Networks
- Automating VLAN Administration
- Tunneling Layer 2 Traffic
- Lab: Advanced Ethernet Switching

Chapter 3: Advanced Spanning Tree

- Spanning Tree Review
- MSTP
- VSTP
- Lab: Advanced Spanning Tree

Chapter 4: Authentication and Access Control

- Authentication Overview
- Access Control Features
- Overview of Authentication Processing
- Lab: Authentication and Access Control

#### **Day 2**

Chapter 5: Deploying IP Telephony Features

- Deployment Scenarios
- IP Telephony Features
- Case Study: Deploying IP Telephony Features
- Lab: Deploying IP Telephony Features

Chapter 6: Class of Service

- Class of Service Review
- Processing and Feature Overview
- Case Study: Implementing Class of Service
- Lab: Class of Service
