

Architecting Microsoft Azure Solutions (MOC 20535)

ID MOC 20535 Preis 2.590,- € (exkl. MwSt.) Dauer 5 Tage

Kursüberblick

Dieser Kurs richtet sich an Architekten, die Erfahrung im Aufbau von Infrastruktur und Anwendungen auf der Microsoft Azure Plattform haben. Die Teilnehmer sollten ein umfassendes Verständnis der meisten auf der Azure-Plattform angebotenen Dienste haben. Die Teilnehmer arbeiten in typischerweise für Unternehmen, die eine aktive Lösung auf Azure haben und planen, bestehende Lösungen zu verbessern oder weitere Lösungen auf der Azure-Plattform einzusetzen. Dieser Kurs richtet sich auch an Architekten, die die Microsoft-Zertifizierungsprüfung 70-535 Architecting Microsoft Azure Solutions ablegen möchten.

Zielgruppe

Dieser Kurs richtet sich an Teilnehmer, die Erfahrung im Aufbau von Infrastruktur und Anwendungen auf der Microsoft-Azure-Plattform haben. Die Studenten sollten ein gründliches Verständnis der meisten auf der Azure-Plattform angebotenen Dienste haben.

Für die interaktive Komponente bietet dieser Kurs den Teilnehmern die Möglichkeit, Azure-Lösungen mit integrierten DevOps-Tools wie Azure-Resource-Manager-Vorlagen, Implementierungen, Ressourcengruppen, Tags und rollenbasierter Zugriffskontrolle einzusetzen.

Dieser Kurs erfordert keine direkte Erfahrung im Schreiben von Anwendungscode oder in der Konfiguration von Servern. Dieser Kurs konzentriert sich auf die architektonischen Vergleiche zwischen Dienstleistungen und technischen Entscheidungen, die notwendig sind, um gut durchdachte Lösungen auf der Azure-Plattform einzusetzen. Dieser Kurs bereitet die Teilnehmer auch auf die

Zertifizierungsprüfung 70-535: Architecting Microsoft Azure Solutions vor.

Die von dieser Schulung angesprochenen Kandidaten verfügen über mittlere Erfahrung in der Konzeption, Implementierung und Überwachung von Azure-Lösungen. Die Kandidaten sind auch mit den Werkzeugen, Techniken und Ansätzen vertraut, die für die Entwicklung von Lösungen auf der Azure-Plattform verwendet werden.

Voraussetzungen

Vor dem Besuch dieses Kurses müssen die Teilnehmer über folgende technische Kenntnisse verfügen:

- Ressourcen und Ressourcengruppe in Azure anlegen.
- Benutzer, Gruppen und Abonnements in einer Azure-Active-Directory-Instanz verwalten.
- Eine Azure Virtual Machine mit verwandten Ressourcen erstellen.
- Container und Blobs in einem Azure-Storage-Konto verwalten.
- App-Service-Pläne erstellen und die mit dem Plan verbundenen Anwendungen verwalten.
- Ein Azure Virtual Network konfigurieren und S2S- und P2S-Konnektivität aktivieren.
- Vernetzte Anwendungskomponenten mit Hilfe von Network Security Groups schützen.
- Automatisierung alltäglicher Aufgaben mit Azure CLI oder Azure PowerShell.
- Eine Azure SQL-, MySQL-, Postgres- oder Cosmos-Datenbankinstanz einsetzen.
- Überwachung vorhandener Azure-Lösungen mit integrierten Metriken, Application Insights oder Operational Insights.

Kursziele

Nach Abschluss dieses Kurses sind die Teilnehmer in der Lage:

- Azure-Architekturkomponenten zu beschreiben, einschließlich Infrastruktur, Tools und Portale. Azure-Resource-Manager-(ARM)-Vorlagen für verschiedene Komplettlösungen zu erstellen und bereitzustellen.
- Verschiedene Infrastruktur-, Serverlos-, Datenbank- und Kommunikationsdienste wie App Services, Virtual Machine Scale Sets, Azure Cosmos DB, SQL Database und Container Service in Azure zu vergleichen und gegenüberzustellen.
- Verschiedene Azure-Plattform-Dienste wie Cognitive Services und Media Services in eine Azure-Gesamtlösung zu integrieren.
- Lösungen, die bei Azure eingesetzt werden, zu sichern, zu überwachen und das Backup durchzuführen.
- Automatisierte DevOps-Lösungen mit einer Kombination aus ARM-Vorlagen, Konfigurationsmanagement-Utilities, Azure CLI und der Cloud Shell zu erstellen.

Kursinhalt

- Anwendungsarchitekturmuster in Azure
- Bereitstellen von Ressourcen mit Azure Resource Manager
- Azure-aaS-basierte Serveranwendungen erstellen
- Erstellen von Managed-Server-Anwendungen in Azure
- Erstellen von Serverless-Anwendungen in Azure
- Unterstützung von Azure-Lösungen mit Azure Storage
- Vergleichen von Datenbankoptionen in Azure
- Vernetzung von Azure-Anwendungskomponenten
- Verwaltung von Sicherheit und Identität für Azure-Lösungen
- Integration der auf der Azure-Plattform verfügbaren SaaS-Services
- Integration von Azure-Lösungskomponenten mittels Messaging Services
- Überwachung und Automatisierung von

Azure-Lösungen

Detaillierter Kursinhalt

Module 1: Application Architecture Patterns in Azure

This module introduces and reviews common Azure patterns and architectures as prescribed by the Microsoft Patterns & Practices team. Each pattern is grouped into performance, resiliency, and scalability categories and described in the context of similar patterns within the category.

Lessons

- Pattern Resources
- Performance Patterns
- Resiliency Patterns
- Scalability Patterns
- Data Patterns

After completing this module, students will be able to:

- Locate and reference the Cloud Design Patterns documentation.
- Locate and reference the Azure Architecture Center.
- Describe various patterns pulled from the Cloud Design Patterns.

Module 2: Deploying Resources with Azure Resource Manager

This module establishes a basic understanding of Azure Resource Manager and the core concepts of deployments, resources, templates, resource groups, and tags. The module will dive deeply into the automated deployment of resources using ARM templates.

Lessons

- ARM Templates
- Role-Based Access Control (RBAC)
- Resource Policies
- Security
- Building Blocks

Lab: Getting Started with Azure Resource

Manager

- Create Resource Groups
- Deploy an Empty Template
- Deploy a Simple Template
- Cleanup Subscription

After completing this module, students will be able to:

- Create a resource group.
- Add resources to a resource group.
- Deploy an ARM template to a resource group.
- Filter resources using tags.
- Author a complex deployment using the Azure Building Blocks tools.

Module 3: Building Azure IaaS-Based Server Applications

This module identifies workloads that are ideally deployed using Infrastructure-as-a-Service services in Azure. The module focuses on the VM Scale Sets and Virtual Machine services in Azure and how to best deploy workloads to these services using best practices and features such as Availability Sets.

Lessons

- High Availability
- Templated Infrastructure
- Domain-Connected Machines

Lab: Deploying Infrastructure Workloads to Azure

- Deploy a Virtual Machine using PowerShell DSC
- Deploy a Virtual Machine Scale Set using PowerShell DSC
- Cleanup Subscription

After completing this module, students will be able to:

- Design an availability set for one or more virtual machines
- Describe the differences between fault and update domains.
- Author a VM Scale Set ARM template.

- Join a virtualized machine to a domain either in Azure or on a hybrid network.

Module 4: Creating Managed Server Applications in Azure

This module describes services that use infrastructure but manage the infrastructure on behalf of the user instead of obfuscating the infrastructure resources. The module focuses on infrastructure-backed PaaS options such as Azure Service Fabric, Container Service, and App Service Environments. The module will explore how to deploy custom workloads to these services such as an HPC batch processing task.

Lessons

- Infrastructure-Backed Platform-as-a-Service (PaaS)
- High-Performance Compute (HPC)
- Migration

Lab: Deploying Managed Server Workloads to Azure

- Create Azure Container Service Cluster
- Deploy Docker Image
- Cleanup Subscription

After completing this module, students will be able to:

- Describe the differences between App Service Environments, Service Fabric and Container Service.
- Use Azure Batch to manage an HPC workload.
- Migrate to an Infrastructure-backed PaaS service from another IaaS service or a legacy Cloud Service.

Module 5: Authoring Serverless Applications in Azure

This module describes how solutions can leverage serverless application hosting services in Azure to host web applications, REST APIs, integration workflows and HPC workloads without the requirement to manage specific server resources. The module focuses on App Services-related

components such as Web Apps, API Apps, Mobile Apps, Logic Apps, and Functions.

Lessons

- Azure Web App
- Azure Functions
- Integration
- High Performance

Lab: Deploying Serverless Workloads to Azure

- Create Web App
- Deploy Web App Code
- Deploy Function App and Code
- Cleanup Subscription

After completing this module, students will be able to:

- Select between hosting application code or containers in an App Service instance.
- Describe the differences between API, Mobile, and Web Apps.
- Integrate an API or Logic App with the API Management service.
- Design an App Service Plan or multi-region deployment for high performance and scale.

Module 6: Backing Azure Solutions with Azure Storage

This module describes how many Azure services use the Azure Storage service as a backing store for other application solution in Azure. The module dives into critical considerations when using Azure Storage as a supplemental service for an all-up Azure solution.

Lessons

- Pricing
- Blob Storage
- Files
- StorSimple

Lab: Deploying Azure Storage to Support Other Workloads in Azure

- Create Required Resources for a Virtual Machine
- Create a VM With a Storage Account

- Create a VM With a Managed Disk
- Cleanup Subscription

After completing this module, students will be able to:

- Determine the ideal pricing option for Azure Storage based on a solution's requirements.
- Identify performance thresholds for the Azure Storage service.
- Determine the type of Storage blobs to use for specific solution components.
- Use the Azure Files service for SMB operations.
- Identify solutions that could benefit from the use of StorSimple physical or virtual devices.

Module 7: Comparing Database Options in Azure

This module compares the various relational and non-relational data storage options available in Azure. Options are explored as groups such as relational databases (Azure SQL Database, MySQL, and PostgreSQL on Azure), non-relational (Azure Cosmos DB, Storage Tables), streaming (Stream Analytics) and storage (Data Factory, Data Warehouse, Data Lake).

Lessons

- Relational
- NoSQL Services
- Azure Cosmos DB
- Data Storage
- Data Analysis

Lab: Deploying Database Instances in Azure

- Deploy a CosmosDB Database Instance
- Validate the REST API
- Cleanup Subscription

After completing this module, students will be able to:

- Compare and contrast various database options on Azure.
- Identify data streaming options for large-scale data ingest.

- Identify longer-term data storage options.

Module 8: Networking Azure Application Components

This module describes the various networking and connectivity options available for solutions deployed on Azure. The module explores connectivity options ranging from ad-hoc connections to long-term hybrid connectivity scenarios. The module also discusses some of the performance and security concerns related to balancing workloads across multiple compute instances, connecting on-premise infrastructure to the cloud and creating gateways for on-premise data.

Lessons

- VNETs
- Load Balancing
- External Connectivity
- Hybrid Connectivity

Lab: Deploying Network Components for Use in Azure Solutions

- Create an ARM Template for a Linux VM
- Duplicate the VM Resources
- Create a Load Balancer Resource
- Cleanup Subscription

After completing this module, students will be able to:

- Describe DNS and IP strategies for VNETs in Azure.
- Compare connectivity options for ad-hoc and hybrid connectivity.
- Distribute network traffic across multiple loads using load balancers.
- Design a hybrid connectivity scenario between cloud and on-premise.

Module 9: Managing Security and Identity for Azure Solutions

This module discusses both security and identity within the context of Azure. For security, this module reviews the various options for monitoring security, the options available for securing data and the options for securing application secrets. For

identity, this module focuses specifically on Azure Active Directory (Azure AD) and the various features available such as Multi-Factor Authentication (MFA), Managed Service Identity, Azure AD Connect, ADFS and Azure AD B2B/B2C.

Lessons

- Security Monitoring
- Data Security
- Application Security Azure Active Directory (Azure AD)
- Hybrid Identity
- Azure AD Application Integration

Lab: Deploying Services to Secure Secrets in Azure

- Deploy Key Vault using ARM Template
- Deploy Virtual Machine using Key Vault Secret
- Cleanup Subscription

After completing this module, students will be able to:

- Integrate their existing solutions with external identity providers using Azure AD B2B or B2C.
- Design a hybrid identity solution.
- Determine when to use advanced features of Azure AD such as Managed Service Identity, MFA and Privileged Identity Management.
- Secure application secrets using Key Vault.
- Secure application data using SQL Database and Azure Storage features.

Module 10: Integrating SaaS Services Available on the Azure Platform

This module introduces multiple SaaS services available in Azure that are available for integration into existing Azure solutions. These services include Cognitive Services, Bot Service, Machine Learning and Media Services.

Lessons

- Cognitive Services
- Bot Services
- Machine Learning

- Media Services

Lab: Deploying Service Instances as Components of Overall Azure Solutions

- Deploy Function App and Cognitive Service using ARM Template
- Cleanup Subscription

After completing this module, students will be able to:

- Identify when Cognitive Services, Bot Service or Machine Learning is appropriate for their solution.
- Compare the various features available in Media Services and determine the appropriate features for their solution.

Module 11: Integrating Azure Solution Components using Messaging Services

This module describes and compares the integration and messaging services available for solutions hosted on the Azure platform. Messaging services described include Azure Storage Queues, Service Bus Queues, Service Bus Relay, IoT Hubs, Event Hubs, and Notification Hubs. Integration services include Azure Functions and Logic Apps.

Lessons

- Event Messaging
- Integration
- IoT

Lab: Deploying Messaging Components to Facilitate Communication Between Azure Resources

- Deploy Service Bus Namespace
- Deploy Logic App
- Cleanup Subscription

After completing this module, students will be able to:

- Compare Storage Queues to Service Bus Queues.
- Identify when to use Azure Functions or Logic Apps for integration components in a solution.

- Describe the differences between IoT Hubs, Event Hubs and Time Series Insights.

Module 12: Monitoring and Automating Azure Solutions

This module covers the monitoring and automation solutions available after an Azure solution has been architected, designed and possibly deployed. The module reviews services that are used to monitor individual applications, the Azure platform, and networked components. This module also covers automation and backup options to enable business-continuity scenarios for solutions hosted in Azure.

Lessons

- Application Monitoring
- Platform Monitoring
- Network Monitoring
- Alerting
- Backup
- Azure Automation
- Config Management
- Auto-Scale

Lab: Deploying Configuration Management Solutions to Azure

- Deploy a Chef Management Server using ARM
- Configure Management Server
- Deploy a VM Scale Set using Chef-Configured VMs
- Cleanup Subscription

After completing this module, students will be able to:

- Compare and contrast monitoring services for applications, the Azure platform, and networking.
- Design an alert scheme for a solution hosted in Azure.
- Select the appropriate backup option for infrastructure and data hosted in Azure.
- Automate the deployment of future resources for backup recovery or scaling purposes.
