Kursüberblick

This three-day course about Application Lifecycle Management (ALM) Octane teaches students how to leverage the streamlined ALM solution to bring continuous quality to lean, agile, and DevOps-focused teams. Students learn how to manage quality information throughout the development cycle, from constructing requirements to designing and executing tests to monitoring defects.

The course uses lectures and a series of hands-on labs to teach the course material. The hands-on labs for this course use version 16.x of the ALM Octane software.

This course is intended for quality assurance engineers, DevOps team members, project managers, and quality assurance leads.

Highlights:

- Overview of ALM Octane
- Create backlogs, releases, and tests in ALM Octane
- Reports to track application development progress and quality
- Integrate Jenkins with ALM Octane
- Working with pipelines in ALM Octane
