

# Upgrading Your Skills to MCSA: Windows Server 2016 (MS-20743)

**ID** MS-20743 **Price** 2,390.— €(excl. tax) **Duration** 5 days

## Course Overview

This five-day, instructor-led course explains how to implement and configure new Windows Server 2016 features and functionality. This course is for information technology (IT) professionals who want to upgrade their technical skills from Windows Server 2008 or Windows Server 2012 to Windows Server 2016. This course presumes a high level of knowledge about previous Windows Server technologies and skills equivalent to the Microsoft Certified Solutions Associate (MCSA): Windows Server 2008 or Windows Server 2012 credential.

This course is not a product-upgrade course, detailing considerations for migrating and upgrading students' specific environment to Windows Server 2016. Rather, this course provides updates to students' existing Windows Server knowledge and skills, as they pertain to Windows Server 2016.

## Who should attend

This course is for IT professionals who are experienced Windows Server 2012 or Windows Server 2008 system administrators, with real-world experience working in a Windows Server 2008 R2 or Windows Server 2008 enterprise environment. Additionally, students should have obtained the MCSA credential for Windows Server 2008 or Windows Server 2012, or they should have equivalent knowledge.

Additionally, IT professionals who plan to take the Microsoft Certified Solutions Expert (MCSE) exams might be interested in this course, as preparation for the MCSA exams, which are a prerequisite for the MCSE specialties.

## Prerequisites

Before attending this course, students must have:

- Two or more years of experience with deploying and managing Windows Server 2012 or Windows Server 2008 environments; NS experience with day-to-day Windows

- Server 2012 or Windows Server 2008 system-administration management and maintenance tasks.
- Experience with Windows networking technologies and implementation.?
- Experience with Active Directory technologies and implementation.
- Experience with Windows Server virtualization technologies and implementation.
- Knowledge equivalent to the MCSA credentials of Windows Server 2008 or Windows Server 2012.

## Course Objectives

After completing this course, students will be able to:

- Install and configure Windows Server 2016.
- Describe storage in Windows Server 2016.
- Implement directory services.
- Implement Active Directory Federation Services (AD FS).
- Describe networking.
- Implement Hyper-V.
- Configure advanced networking features.
- Implement software-defined networking.
- Implement remote access.
- Deploy and manage Windows and Hyper-V containers.
- Implement failover clustering.
- Implement failover clustering by using virtual machines.

## Course Content

- Installing and configuring Windows Server 2016
- Overview of storage in Windows Server 2016
- Implementing the Directory Services feature
- Implementing AD FS
- Implementing network services
- Implementing Hyper-V
- Configuring advanced networking features
- Implementing software defined networking
- Implementing remote access
- Deploying and managing Windows Server and Hyper-V containers
- Implementing failover clustering
- Implementing failover clustering with Windows Server 2016 Hyper-V

## Detailed Course Outline

### Module 1: Installing and configuring Windows Server 2016

This module explains how to install and perform post-installation configuration of Windows Server 2016 servers.

#### Lessons

- Introducing Windows Server 2016
- Installing Windows Server 2016
- Configuring Windows Server 2016
- Preparing for upgrades and migrations
- Migrating server roles and workloads
- Windows Server activation models

#### Lab: Installing and configuring Nano Server

- Installing Nano Server
- Completing post-installation tasks on Nano Server

After completing this course, students will be able to:

- Explain Windows Server 2016.
- Install Windows Server 2016.
- Configure Windows Server 2016.
- Prepare for upgrades and migrations.
- Migrate server roles and workloads.
- Describe the Windows Server activation models.

### Module 2: Overview of storage in Windows Server 2016

This module explains how to configure storage in Windows Server 2016.

#### Lessons

- Overview of storage in Windows Server 2016
- Configuring Internet SCSI (iSCSI) storage
- Configuring the Storage Spaces feature in Windows Server 2016
- Implementing the Data Deduplication feature

#### Lab: Implementing and managing storage

- Implementing File Server Resource Manager (FSRM)
- Configuring iSCSI storage

#### Lab: Configuring storage spaces

- Configuring redundant storage spaces
- Implementing the Storage Spaces Direct feature

After completing this module, students will be able to:

- Explain storage in Windows Server 2016.
- Configure iSCSI storage.
- Configure the Storage Spaces feature in Windows Server 2016.
- Implement Data Deduplication.

### Module 3: Implementing the Directory Services feature

This module explains how to implement the Directory Services feature.

#### Lessons

- Deploying AD DS domain controllers
- Implementing service accounts
- What is Azure AD?

#### Lab: Implementing and Managing AD DS

- Cloning an AD DS domain controller
- Implementing service accounts

After completing this module, students will be able to:

- Deploy AD DS domain controllers.
- Implement service accounts.
- Explain Azure AD.

### Module 4: Implementing AD FS

This module explains how to implement an AD FS deployment.

#### Lessons

- Overview of AD FS
- Deploying AD FS
- Implementing AD FS for a single organization
- Implementing Web Application Proxy
- Implementing Azure AD FS SSO with Microsoft Online Services

#### Lab: Implementing AD FS

- Installing and configuring AD FS
- Configuring an internal application for AD FS

#### Lab: Implementing Web Application Proxy

- Implementing Web Application Proxy

After completing this module, students will be able to:

- Describe of AD FS.
- Deploy AD FS.
- Implement AD FS for a single organization.
- Implement Web Application Proxy.
- Implement Azure AD FS SSO with Microsoft Online Services.

### Module 5: Implementing network services

This module explains how to configure advanced features for Dynamic Host Configuration Protocol (DHCP) and configure IP Address Management (IPAM).

#### Lessons

- Overview of networking enhancements
- Implementing the IP address management
- Managing IP address spaces with IPAM

#### Lab: Implementing network services

- Configuring DNS policies
- Configuring DHCP failover
- Configuring IPAM

After completing this module, students will be able to:

- Describe networking enhancements.
- Implement IP address management.
- Manage IP address spaces with IPAM.

### Module 6: Implementing Hyper-V

This module explains how to install and configure Hyper-V virtual machines.

#### Lessons

- Configuring the Hyper-V role in Windows Server 2016
- Configuring Hyper-V storage
- Configuring Hyper-V networking
- Configuring Hyper-V virtual machines

#### Lab: Implementing server virtualization with Hyper-V

- Installing the Hyper-V server role
- Configuring virtual networking
- Creating and configuring a VM

After completing this module, students will be able to:

- Configure the Hyper-V role in Windows Server 2016.
- Configure Hyper-V storage.
- Configure Hyper-V networking.
- Configure Hyper-V virtual machines.

### Module 7: Configuring advanced networking features

This module explains how to implement an advanced networking infrastructure.

#### Lessons

- Overview of high-performance networking features
- Configuring advanced Hyper-V networking features

#### Lab: Configuring advanced Hyper-V networking features

- Creating and using Microsoft Hyper-V virtual switches
- Configuring and using the advanced features of a virtual switch

After completing this module, students will be able to:

- Describe high-performance networking features.
- Configure advanced Hyper-V networking features.

### Module 8: Implementing software defined networking

This module explains how to implement software-defined networking.

#### Lessons

- Overview of software-defined networking
- Implementing network virtualization
- Implementing the Network Controller feature

#### Lab: Implementing Network Controller

- Deploying Network Controller
- Configuring network services with Network Controller
- Managing and monitoring with Network Controller

After completing this module, students will be able to:

- Describe software defined networking.
- Implement network virtualization.
- Implement Network Controller.

### Module 9: Implementing remote access

This module explains how to configure connectivity for remote

users by using the DirectAccess feature.

### Lessons

- Remote access overview
- Implementing DirectAccess
- Implementing a virtual private network (VPN)

### Lab: Implementing DirectAccess

- Configuring DirectAccess by using the Getting Started Wizard
- Testing DirectAccess

After completing this module, students will be able to:

- Describe common remote-access solutions and technologies.
- Implement DirectAccess.
- Implement VPNs.

### Module 10: Deploying and managing Windows Server and Hyper-V containers

This module provides an overview of Windows Server 2016 containers. Additionally, it explains how to deploy, install, configure, and manage containers in Windows Server 2016.

### Lessons

- Overview of Windows Server 2016 containers
- Deploying Windows Server and Hyper-V containers
- Installing, configuring, and managing containers

### Lab: Installing and configuring containers

- Installing and configuring Windows Server containers by using Windows PowerShell
- Installing and configuring Windows Server containers by using the Docker engine

After completing this module, students will be able to:

- Explain the purpose of Windows Server and Hyper-V containers.
- Deploy and manage Windows Server and Hyper-V containers.
- Install, configure, and manage containers.

### Module 11: Implementing failover clustering

This module explains how to implement failover clustering to

provide high availability for network services and applications.

### Lessons

- Overview of failover clustering
- Implementing a failover cluster
- Configuring highly-available applications and services on a failover cluster
- Maintaining a failover cluster
- Implementing a stretch cluster

### Lab: Implementing failover clustering

- Configuring iSCSI storage
- Configuring a failover cluster
- Deploying and configuring a highly-available file server
- Validating the deployment of a highly-available file server
- Configuring the Cluster-Aware Updating feature on the failover cluster

After completing this module, students will be able to:

- Describe the concept of failover clustering.
- Implement a failover cluster.
- Configure highly-available applications and services on a failover cluster.
- Maintain a failover cluster.
- Implement a stretch-failover cluster.

### Module 12: Implementing failover clustering with Windows Server 2016 Hyper-V

This module explains how to deploy and manage Hyper-V virtual machines in a failover cluster.

### Lessons

- Overview of the integration of Hyper-V Server 2016 with failover clustering
- Implementing Hyper-V virtual machines on failover clusters
- Implementing Windows Server 2016 Hyper-V virtual machine migration
- Implementing the Hyper-V Replica feature

### Lab: Implementing failover clustering with Windows Server 2016 Hyper-V

- Configuring Hyper-V Replica
- Configuring a failover cluster for Hyper-V
- Configuring a highly available virtual machine

After completing this module, students will be able to:

- Describe how Windows Server 2016 Hyper-V integrates with failover clustering.
- Implement Hyper-V virtual machines on failover clusters.
- Implement Hyper-V virtual machine migration.
- Implement Hyper-V Replica.

# About Fast Lane

Fast Lane is a global, award-winning specialist in technology and business training as well as consulting services for digital transformation. As the only global partner of the three cloud hyperscalers- Microsoft, AWS and Google- and partner of 30 other leading IT vendors, Fast Lane offers qualification solutions and professional services that can be scaled as needed. More than 4,000 experienced Fast Lane professionals train and advise customers in organizations of all sizes in 90 countries worldwide in the areas of cloud, artificial intelligence, cyber security, software development, wireless and mobility, modern workplace, as well as management and leadership skills, IT and project management.

## Fast Lane Services

- ✓ High End Technology Training
- ✓ Business & Soft Skill Training
- ✓ Consulting Services
- ✓ Managed Training Services
- ✓ Digital Learning Solutions
- ✓ Content Development
- ✓ Remote Labs
- ✓ Talent Programs
- ✓ Event Management Services

## Training Methods

- ✓ Classroom Training
- ✓ Instructor-Led Online Training
- ✓ FLEX Classroom – Classroom & Online Hybrid
- ✓ Onsite & Customized Training
- ✓ E-Learning
- ✓ Blended & Hybrid Learning
- ✓ Mobile Learning

## Technologies & Solutions

- ✓ Digital Transformation
- ✓ Artificial Intelligence
- ✓ Cloud
- ✓ Networking
- ✓ Cyber Security
- ✓ Wireless & Mobility
- ✓ Modern Workplace
- ✓ Data Center

**Worldwide Presence**  
with high-end training centers  
around the globe

**Multiple Awards**  
from vendors such as AWS,  
Microsoft, Cisco, Google, NetApp,  
VMware

**Experienced SMEs**  
with over 19.000 combined  
certifications
